## INSTRUMENTS

**Front End:**   JavaScript, jQuery, Angular, React, Ionic, HTML, CSS, SCSS, Backbone

**Back End:**   Node, Express, Bower, MySQL, MongoDb, Mongoose, SQLite, Sequelize, PostgreSQL, Nodal

**Et Cetera:**   Amazon Web Services, Heroku, DigitalOcean, Grunt, Gulp, Webpack, Docker, Travis, Mocha, Chai, Waffle

**Programs:**   Photoshop, Illustrator, InDesign, Final Cut Pro 7

## APPLICATIONS

**Breadcrumb**   *User generated tours app*     breadcrumb.real-deal.studio     github.com/real-DEAL/Breadcrumb

- Created with Ionic to develop for Android and iOS simultaneously using HTML, CSS, and Angular
- Composed front end architecture with HTML, CSS, and Ionic CSS components for seamless user interface and functionality
- Combined CSS with Javascript and Angular directives to dynamically update dom element styles
- Produced transition animations with CSS keyframes for its simplicity and modularity
- Integrated Auth0 for its quick, straightforward installation and social media login options
- Generated PostgreSQL database to support a complex, relational design
- Managed project progress through Scrum with Waffle for its tight integration with Github issues

**What's Happenin'**  *Event creation/finder app*     whats-happenin.real-deal.studio   github.com/Spurr-App/Whats-Happenin

- Constructed with React to enable different states over multiple views while remaining a one page application
- Transformed site-wide visuals with Material-UI thanks to compatibility with React and modular classes
- Incorporated Tinypic plugin to allow user uploaded images while reducing database size
- Utilized Google Maps API for the best possible map experience for our users

**Spurr**   *Anonymous secret sharing app*     spurr.real-deal.studio     github.com/Spurr-App/Spurr-App

- Incorporated ngRouter with Angular for simple view transition and clear code separation for each page
- Authenticated user data with Passport, using its integration of third-party app user information
- Deployed using AWS for its quick setup and flexibility of environments and images

**Logoer**   *Simplified logo creation app*     logoer.real-deal.studio     github.com/livrush/logoer

- Developed with Angular to incorporate data from controllers directly into HTML views
- Generated shapes with HTML5 SVGs to retain sharp resolution while scaling

## EXPERIENCE

**Decode Hackathon - *Mentor***                                          **New Orleans, LA**          2017

- Led a group of students in creating an app in the space of 48 hours

**Freelance Web and Graphic Design - *Designer***                                      2010 - Present

- Designed posters, show programs, and websites to represent clients' needs
- Drafted resumes, invoices, forms, and other documents for professional use

**New Orleans City Planning Commission - *Office Assistant***                 **New Orleans, LA**          2016
